Vision for ESPA

I would be honoured if I could get the possibility to work as treasurer of ESPA in order to help expanding our network of experts in paediatric anaesthesia. I feel we already are on a good path to create a real European society including all different national societies with all their different views of the same goal – providing the best and safest anaesthesia to children. By doing so we should and up implementing more than just minimal standards for paediatric anaesthesia in most national societies.

In my vision I see ESPA gathering the best of European knowledge of Paediatric Anaesthesia and carrying it out to every Anaesthetist working with children – and helping others to develop new strategies for improving the daily routine and the security and quality of care for our patients.
