Book co-author: Theory and Practice of Paediatric Anaesthesia (2015; handbook in Hungarian)

I have been working in the ESPA Executive Board (ExBo) since 2018 and now with some experience I offer my help for another term. The reason is that coming from Eastern Europe the unequal level in both the everyday practice and the education in paediatric anaesthesia is even more clearly seen in different countries. Though the gap is narrowing there are still marked differences in the quality of standards in paediatric anaesthesia in Eastern- and Western European countries. As the aim of ESPA is rising paediatric anaesthesia to the same high level and improve safety in all European countries as an ExBo member I do feel that I could help this project.
