

My name is Emilie Krite Svanberg. I work as a Pediatric Anaesthesiologist at the Children´s Hospital, Skåne University Hospital, Lund, Sweden.

Apart from my clinical work I am highly engaged and hold lectures the in education of both resident doctors and specialist colleagues in Anaesthesiology and Intensive Care, med-school students and the education of specialized nurses in both Anaesthesiology and Intensive Care. I am also, since January 2021, Director of Studies for resident doctors in Pediatric Anaesthesiology and Intensive Care, Lund.

In 2016 i defended my Doctorial thesis with the title " Non-Invasive optical monitoring of free and bound oxygen in humans", Lund University - with high focus on lung monitoring in newborn/preterm born infants. Since then I am a part time researcher working interdisciplinary with studies of tissue oxygenation and physiological gases, using broad-band and narrow-band optical spectroscopy.

I believe and hope I can contribute to the very nice and important work you in ESPA do - I am very passionate about education (and from what I have been told also quite good at it 😊) and I am an active researcher, mainly focusing om pediatric lung monitoring.

I am hard working and enthusiastic as a person, always trying to encourage people I meet!
